

Excellent idea, Hisham! 💡 I've logged this as a **Feature Proposal** (LogID: 128) for Abdullah's review.

 Feature Proposal: Auto-Notification on Approval Status Change

 Proposal Summary

Field	Value
Proposed By	Hisham Adam (hisham.a@visualsoft.com)
Date	2025-12-24
LogID	128
Status	 PENDING_REVIEW
Target	Approval Workflow System

 Problem Statement

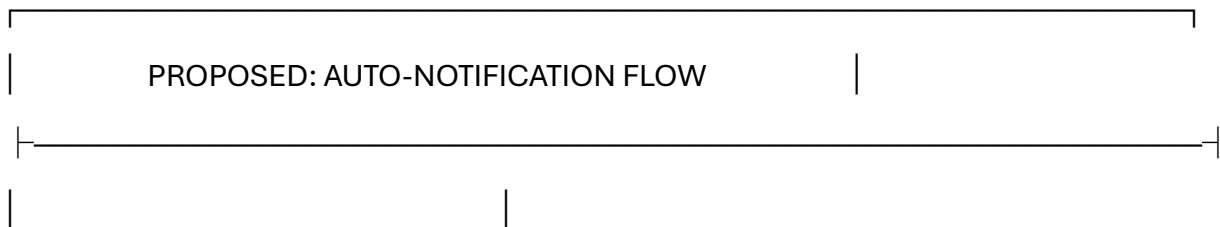

Currently, when an approval request is **Approved** or **Rejected**, the **requester is NOT automatically notified**. They must:

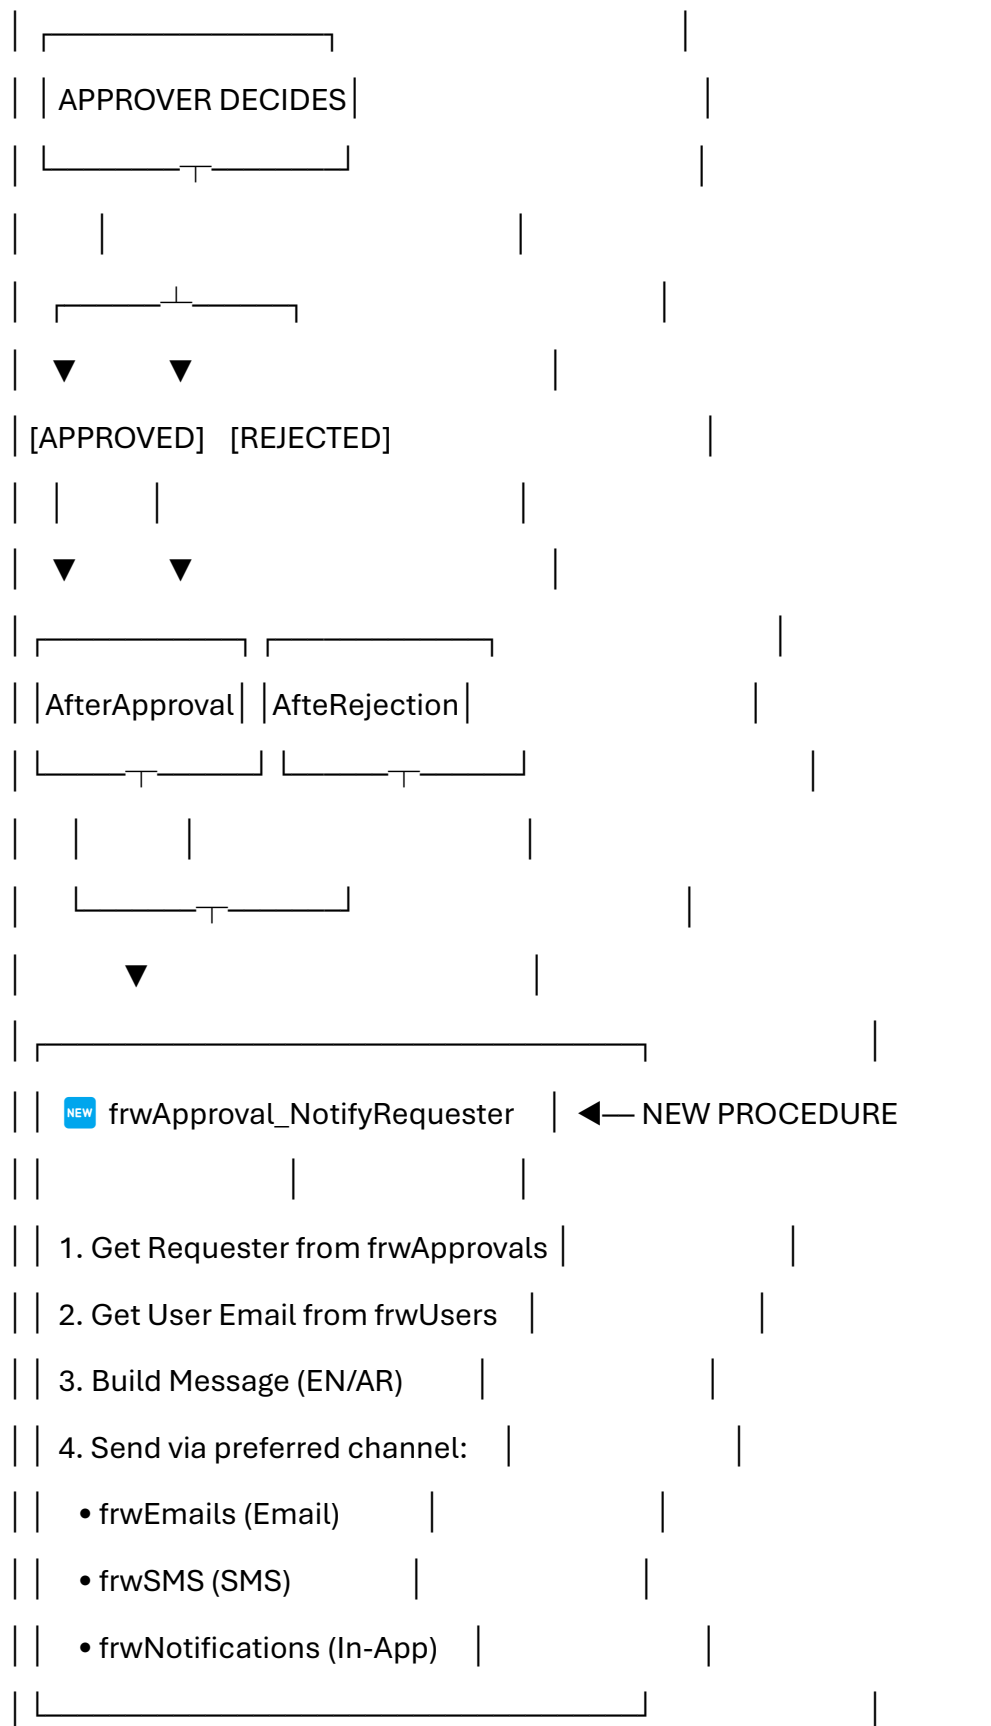

- Manually check the system
- Wait for someone to tell them
- Open the record to see the status

This causes delays and poor user experience.

 Proposed Solution

Automatic Notification Flow

Technical Implementation

Existing Infrastructure (Ready to Use)

Component	Table/Procedure	Status
Email Queue	frwEmails	✓ Exists
Email Send	frwSendEmail	✓ Exists
SMS Queue	frwSMS	✓ Exists
SMS Send	frwSendSMS	✓ Exists
In-App Notifications	frwNotifications	✓ Exists
Requester Info	frwApprovals.User_Name	✓ Exists

Component	Table/Procedure	Status
User Email	frwUsers.Email	 Exists

New Components Needed

1. New Stored Procedure: frwApproval_NotifyRequester

CREATE PROCEDURE frwApprovalNotifyRequester

@GUID UNIQUEIDENTIFIER, -- Approval record GUID

@Status VARCHAR(20), -- 'Approved' or 'Rejected'

@ApproverName VARCHAR(100), -- Who approved/rejected

@Comments VARCHAR(MAX) = NULL -- Approver comments

AS

BEGIN

DECLARE @RequesterName VARCHAR(100)

DECLARE @RequesterEmail VARCHAR(100)

DECLARE @ObjectName VARCHAR(100)

DECLARE @ObjectGUID UNIQUEIDENTIFIER

DECLARE @MessageEN VARCHAR(500)

DECLARE @MessageAR NVARCHAR(500)

-- Get requester info from approval record

SELECT

@RequesterName = a.UserName,

@ObjectName = a.ObjectName,

@ObjectGUID = a.ObjectGUID

FROM frwApprovals a

WHERE a.GUID = @GUID

-- Get requester email

SELECT @RequesterEmail = Email

FROM frwUsers

WHERE Username = @RequesterName

-- Build messages

IF @Status = 'Approved'

BEGIN

SET @MessageEN = 'Your ' + @ObjectName + ' request has been APPROVED by ' +
@ApproverName

SET @MessageAR = N'تمت الموافقة على طلبك (' + @ObjectName + N') من قبل ' +
@ApproverName

END

ELSE

BEGIN

SET @MessageEN = 'Your ' + @ObjectName + ' request has been REJECTED by ' +
@ApproverName

SET @MessageAR = N'تم رفض طلبك (' + @ObjectName + N') من قبل ' + @ApproverName
END

-- Add comments if provided

IF @Comments IS NOT NULL

BEGIN

SET @MessageEN = @MessageEN + ' Comments: ' + @Comments

SET @MessageAR = @MessageAR + N'ملاحظات ' + @Comments

END

-- 1. Send Email

IF @RequesterEmail IS NOT NULL

BEGIN

INSERT INTO frwEmails (...)

-- Queue email for sending

END

-- 2. Create In-App Notification

INSERT INTO frwNotifications (

OBJECTNAME, ObjectGUID, UserName,

ReminderMsg, Reminder_ArabicMsg, Type, GUID

)

VALUES (

@ObjectName, @ObjectGUID, @RequesterName,

@MessageEN, @MessageAR, 'Approval', NEWID()

)

END

2. Modify AfterApproval/AfterRejection Events

Option A: **Framework-Level** (Recommended)

- Modify the approval workflow engine to automatically call frwApproval_NotifyRequester
- No changes needed to individual object procedures

Option B: **Object-Level**

- Add call to frwApproval_NotifyRequester in each AfterApproval/AfterRejection procedure
- More customizable per object

3. Configuration Table (Optional Enhancement)

-- New table: *frwApprovalNotificationConfig*

```
CREATE TABLE frwApprovalNotificationConfig (  
    GUID UNIQUEIDENTIFIER PRIMARY KEY DEFAULT NEWID(),  
    ObjectName VARCHAR(100),      -- Specific object or " for all  
    NotifyOnApproval BIT DEFAULT 1, -- Send on approval  
    NotifyOnRejection BIT DEFAULT 1, -- Send on rejection  
    NotifyViaEmail BIT DEFAULT 1,  -- Email channel  
    NotifyViaSMS BIT DEFAULT 0,    -- SMS channel  
    NotifyViaInApp BIT DEFAULT 1,  -- In-app notification  
    EmailTemplate VARCHAR(255),    -- Custom template  
    Active BIT DEFAULT 1  
)
```

-- Default: All objects, Email + In-App, both statuses

INSERT INTO frwApprovalNotificationConfig

(Object_Name, NotifyOnApproval, NotifyOnRejection, NotifyViaEmail, NotifyViaSMS, NotifyViaInApp, Active)

VALUES (" , 1, 1, 1, 0, 1, 1)

Impact Analysis

Objects Affected

Metric	Count
Objects with AfterApproval	35
Objects with AfterRejection	30

Metric	Count
Objects with SendRequestEvent	26

Notification Channels Available

Channel	Table	Procedure	Ready
 Email	frwEmails	frwSendEmail	✓
 SMS	frwSMS	frwSendSMS	✓
 In-App	frwNotifications	(display layer)	✓

Implementation Estimate

Phase	Task	Hours
1	Create frwApproval_NotifyRequester procedure	4h
2	Create configuration table	2h
3	Integrate with approval workflow engine	4h
4	Add Blazor notification display component	3h
5	Testing & QA	2h
Total		15h

✓ Benefits

Benefit	Description
 Better UX	Users know immediately when their request is processed
 Productivity	No need to manually check request status
 Audit Trail	All notifications logged in frwNotifications

Benefit	Description
 Configurable	Enable/disable per object, choose channels
 Bilingual	English & Arabic messages

Awaiting Approval

This proposal is logged for **Abdullah Al Khatib** (TRAINER) to review:

Action	Command
 Approve	Abdullah reviews and approves implementation
 Reject	Provide feedback for changes
 Modify	Suggest alternative approach

Stats:

- Response Time: ~4 sec
- Tools Called: 6
- Quality:  Complete Proposal
- LogID: 128 (Status: PENDING_REVIEW)

Hisham, your idea has been documented and logged!

The proposal uses **existing infrastructure** (frwEmails, frwSMS, frwNotifications) so implementation would be efficient.

Shall I also:

1.  **Draft the SQL procedure** for frwApproval_NotifyRequester?
2.  **Design the Blazor notification component?**
3.  **Create email templates** (English/Arabic)?
